

Conclusion

NEXT STEPS

► I would love to build a second model which works on a user-basis,
rather than on a comment basis.

► For this model, I would take a rolling average of all features for a user's most recent posts.

► I believe this model will have a higher accuracy rate, as the originality of Bot posts will be, on average, much lower than for human users.

Conclusion

NEXT STEPS

- ▶ I would love to build a second model which works on a user-basis rather than on a comment basis.
- ▶ For this model, I would take a rolling average of all features for a user's most recent posts.
- ▶ I believe this model will have a higher accuracy rate, as the originality of Bot posts will be, on average, much lower than for human users.
